Air Lift Air Springs - Tow & Haul with Safety and Comfort

CALL R H SCALES CO., - WE'LL HELP YOU GET THE AIRLIFT KIT YOU NEED!

AIR LIFT 1000 – FOR TRUCKS WITH COIL SPRUNG REAR SUSPENSIONS

- Up to 1,000 pounds of load leveling capacity
- Fits most open coil springs on the front or rear
- Tough molded polyurethane construction
- Air adjustable to custom tune the desired ride
- Easy to install using common tools

AIR LIFT RIDECONTROL –

- Up to 2,000 pounds of load leveling capacity*
- Air adjustable from 5 to 100 PSI
- Air Lift Exclusive: alignment tool included for easy installation
- Most popular kits require no drilling into the frame
- Easy to install in 2 hours or less

The LoadLifter 5000 kit's air springs install between your truck's frame and leaf springs. When inflated, the springs take pressure off your truck's suspension and cause your truck to sit more level and get a more even distribution of weight between its front and rear. The more even stance and weight gives your truck a more proper center of gravity and keeps all four of your tires in better contact with the road. Air Lift's air springs are fully adjustable for whatever load you're carrying and can hold anywhere from 5psi to 100psi of air pressure to compensate for a huge weight range.

Adjustable air helper springs are load and towing problem solvers for your vehicle. Stiff steel factory suspensions must compromise between ride comfort and load hauling capacity. Smooth ride suspensions can't carry heavy loads; heavy springs ride rough, especially when the vehicle is unloaded. Air Lift adjustable air spring kits solve these problems by allowing you to tune your suspension under all load and road conditions.

AIR LIFT QUICKSHOT AIR COMPRESSION KITS

- In-dash control panel for easy monitoring and adjustment
- 81 cfm, 33% duty cycle compressor (at 100 PSI)
- 2-gallon reserve tank
- Convenient easy-connect auxiliary air line
- Single gauge/single path system or single gauge/double needle/dual path system

SuperSprings®

SuperSprings are progressive in nature in that they work on an as-needed basis. The installed springs are under nominal tension even when the vehicle is unloaded.
